3 TIP*

BEFORE YOU BEGIN: For the best possible results, wash your hands prior to installation. Make sure both your installation area and device are clean and free of debris and skin oils.

Step 1: Carefully remove the ZAGGskin from its paper backing.

Step 2: Align the ZAGGskin with your device. We recommend aligning to the top first, then the sides, and finally the bottom. Check the overall alignment as carefully as possible prior to placing the ZAGGskin.

Step 3: Using your thumbs and fingertips, apply the ZAGGskin to your device and work until the skin lies smoothly on the device. If the alignment of your ZAGGskin is not correct, simply peel it off and re-apply.

TIP*: For securing problematic corners and edges, apply pressure to the tabs and flaps by holding them against the palm of your hand for 30 seconds to 1 minute. This process may need to be repeated several times, but will help secure difficult pieces.

For best results please review install video at:
